These were derived from expressed sequence tags (ESTs from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a cDM
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Isolated polypeptide for treatment of diseases, diagnostics, raising antibodies and research use

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's diseases, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Activin/inhibin activity, chemotactic/chemokinctic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ά

The present invention relates to the isolation of human polynucleotide sequences that are differentially expressed during foam cell differentiation. The polynucleotide sequences of the invention or a composition comprising these polynucleotides are useful as a high throughput method for detecting altered expression of one or more polynucleotides in a sample. The polynucleotides can be used in the diagnosis of disorders associated with foam cell development such as atherosclerosis, cerebral stroke, and cardiovascular disorders such as coronary artery disease. The polynucleotide sequences can also be used as PCR primers and probes. The polynucleotides of the invention are also useful in gene therapy. AASS4746-AASS9021 represent the human polynucleotide sequences of the invention are also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Composition useful for diagnosis of conditions, disorders or diseases associated with atherosclerosis, comprises several polynucleotides that are differentially expressed in foam cell development .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1002 GCTTGATGGTGTCTCCTGCTCCGGTAATGAATCTTTTCTTTGGGACTGCAGACATTCCGG 1061

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system alseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to TANGO or INTERCEPT proteins and coding sequences (see AAF45121-F45136 and AAF45138-F45139 and AAB66031-B66057, AAB66046-B66083 and AAB66085). The TANGO/INTERCEPT proteins and coding sequences are useful for the treatment of neurological disorders such as central nervous system (CNS) disorders, CNS-related disorders, focal brain disorders, global-diffuse cerebral disorders and other neurological and cerebrovascular disorders. The CNS disorders include Alzheimer's disease, senile dementia, Huntington's disease, amyotrophic lateral sclerosis, Parkinson's, Gilles de la Tourette's syndrome, neuropsychiatric disorders, psychoactive substance use disorders, anxiety, and bipolar affective disorder. The present sequence is a sequence used in a sequence homology alignment with the TANGO/INTERCEPT
                                                                                                                                                                                                                                                                                                                                                                                                                   central nervous system; footal brain disorder; bipolar affective disorder; global-diffuse cerebral disorder; cerebrovascular; Alzheimer's disease; senile dementia; Huthington's disease; amyotrophic, lateral sclerosis; Parkinson's; Gilles de la Tourette's syndrome; hypertension; sleep; neuropsychiatric; psychoactive substance use; anxiety; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TANGO and INTERCEPT nucleic acids, proteins, and antibodies, useful for screening assays and diagnostic assays and for the treatment of neurological diseases such as Alzheimer's, Parkinson's and Huntington's
                                                                                                        4301

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    molecules which correspond to the BESTS. Proteins encoded by the BESTS are useful in assays for determining biological activity and raising antibodies. They may be useful for treatment of autoimmune disorders (multiple sclerosis, insulin dependent diabetes), allergic conditions (asthma), myeloid or lymphoid cell deficiencies, wounds, burns, ulcers, osteoporosis, osteoarthritis, central nervous system disorders (Alzheimer's, Parkinson's, Huntington's disease, stroke), coaqulation disorders (haemophilia, thrombosis), inflammatory disorders (Crohn's disease). Lumours, bacterial, fungal or viral infections, depression and psoriasis. AAA43420 to AAA43425 represent linker variants which are given in the exemplification of the present invention.
                                                                                                                                                                  Isolated polynucleotides, and encoded proteins, comprising secreted expressed sequence tags (sESTs), useful for treating various disorders such as autoimmune, infectious, and central nervous system disorders -

                                                                                                                                                                                                                                                                                                          Addition to Annually in the control of the control of activities depending on the tissues they were isolated from human, mouse, xenopus and rat tissue sources. The SESTs can have a range of activities depending on the tissues they were isolated from. The activities include: chemotactic; proliferative; immunomodulatory, haematopoletic; chemotantic; antibacterial; antifungal; antiviral; antidiabetic; antibacterial; antifungal; antiviral; antidiabetic; antisathmatic; vulnerary; antilicer; osteopathic; neuroprotective; anticonviount; and antidepressant. The SESTs can be used for gene therapy and in vaccines. The SESTs are useful as probes for the identification and isolation of full-length cons.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents a human expressed sequence tag (EST). The polynucleotide, which is a secreted EST, and the encoded protein are predicted to have useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity, haematopoiesis regulating activity, tissue growth activity, activin/inhibin activity, chemotactic/Chemofinetic activity, activin/linhibin activity, activity, activity, activin/linhibin activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    26 TAATGATGCTGCCTCAAAACTCGTGGCATATTGATTTTGGAAGATGCTGCTGTCATCAGA 85

                                                                                                                                                                                                                                                                          The present invention relates to TANGO or INTERCEPT proteins and coding sequences (see AAF45121-F45136 and AAF45138-F45139 and AAB66031-B66057, AAB66064-B66083 and AAB66085). The TANGO/INTERCEPT proteins and coding sequences are useful for the treatment of neurological disorders such as central nervous system (CNS) disorders, CNS-related disorders, focal brain disorders, global-diffuse cerebral disorders and other neurological and cerebrovascular disorders. The CNS disorders include Alzheimer's disease, senile dementia, Huntington's disease, amyotrophic autonomic function disorders such as hypertension and sleep disorders, anxiety, and bipolar affective disorder.
                                                                                                                                                                                     TANGO and INTERCEPT nucleic acids, proteins, and antibodies, useful for screening assays and diagnostic assays and for the treatment of neurological diseases such as Alzheimer's, Parkinson's and Huntington's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                220

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to TANGO or INTERCEPT proteins and coding sequences (see AAF45121-F45136 and AAF45138-F45139 and AAB66031-B66057, AAB66064-B66033 and AAB66085). The TANGO/INTERCEPT proteins and coding sequences are useful for the treatment of neurological disorders such as central nervous system (CNS) disorders, CNS-related disorders, focal brain disorders, global-diffuse cerebral disorders and other neurological and cerebrovascular disorders. The CNS disorders include Alzhelmer's disease, senile dementia, Huntington's disease, amyotrophic lateral sclerosis, Parkinson's, Gilles de la Tourette's syndrome, autonomic function disorders such as hypertension and sleep disorders, neuropsychiatric disorders, psychoactive substance use disorders, anxiety, and bipolar affective disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                             TANGO and INTERCEPT nucleic acids, proteins, and antibodies, useful for screening assays and diagnostic assays and for the treatment of neurological diseases such as Alzheimer's, Parkinson's and Huntington's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                340

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           protein, POLY8. POLYX nucleic acids, polypeptides and antibodies to POLYX can be used for treating or preventing a POLYX associated disorder in a subject, preferably a human. These can be used in the manufacture of a medicament for treating a syndrome associated with a human disease selected from a POLYX-associated disorder, where the therapeutic is a POLXX polypeptide, a POLYX nucleotide or a POLYX antibody. They may also be used to screen for a modulator of activity, or latency, or predisposition to a POLYX associated disorder, e.g. cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  482

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       q
                                                                                                                                                                                                                                                                                                                                                                                                                           Sequences AAU27676-AAU28019 represent full-length polypeptides and contig polypeptides of the invention. The proteins and their associated DNA sequences are useful for the treatment, diagnosis and prevention of various types of disorder in a mammalian subject such as a human, dog, monkey, mouse, hamster or rat, The disorders include cancers such as multiple sclerosis, connective tissue disease, rheumatoid arthritis, diabetes mellitus, allergic rhinitis, asthma and eczema, nervous system disorders such as Parkinson's disease, rheumatoid arthritis, chorea, amyotrophic lateral sclerosis, spinal muscular atrophy and disorders such as parkinson's disease, inflammatory disorders such as nephritis, croin's chorea, amyotrophic lateral sclerosis, spinal muscular atrophy and disease. The sequences saxibit scitiity relating to angloidenesis, cell proliferation, cell differentiation, stem cell growth factor, activin or inhibin. Therefore, they can be used to manipulate stem cells in culture to give rise to neurcepithelial cells that can be used to augment or replace cells damaged by illness, accidental damage to generic augment or replace cells damaged by illness, accidental damage or genetic cartilage, tendons and ligaments and in tissue repair and burn healing. Note: Some sequences for this patent did not form part of the printed specification, but were obtained in electronic format directly from WIPPO cat fitp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                             Novel polypeptides and nucleic acids obtained from cDNA libraries prepared from various human tissues, for diagnosis, treatment of cancer, neurological, inflammatory disorders and for use in arrays for detection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               872

```
New haptoglobin-haemoglobin complex or its mimics or receptors, useful in gene therapy, particularly for treating an individual suffering from e.g. haemolysis, anaemia, inflammation, infection, cancer or autoimmunity
                                                                                              present invention relates to a new haptoglobin-haemoglobin (Hp-Hb)
                                                                               Claim 1; Fig 5; 70pp; English.

```

complex, or its part or maine; being operably linked to a substance, capable of binding a CD163 receptor and/or a CD163 receptor variant.

The HP-HP complex or its maine; her CD163 variant or the CD163 receptor are useful as a medicament or in the manufacture of a medicament for are useful as a medicament or in the manufacture of a medicament for treating an individual. The medicament comprises at least one drug to be delivered to a cell expressing a CD163 receptor or a CD163 variant. The continuous and an anticancer drug, e.g. an anti-HIV (human continuous) drug, e.g. an anti-HIV (human continuous) drug, e.g. an anti-HIV (human continuous) drug, the CD163 variant or the medicament are immunodeficlency virus) drug. In particular, the HP-Hb complex or its minic, the CD163 variant or the CD163 variant or the medicament are coseful for treating haemolysis and/or other haematological conditions, applastic anaemia, iron-deficiency anaemia, megaloblastic anaemia, caplastic anaemia, polycythaemia, malaria, leukaemia, myelodysplasia, lumpon a leucopenia, splenectomia, inflammation, infection, cancer, cautoimmunity or immunodeficiency. The medicament of an individual. The medicament is also useful for inhibiting (in vivo) uptake of haemogloblo in in cells presenting a CD163 variant is also useful in a presenting and/or controlling a condition in an individual. Controlling a condition in an individual. Controlling a condition in an individual. The complex in serum and/or plasma of an individual. The present amino acid sequence represents the human CD163 receptor represents and prove the present and or the invention.

                                                                                                                                              δy
                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to human nucleic acids (AAI57798-AA161369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic. the encoded polypeptides (AAM38642-AAM42213) with nootropic. immunosuppressant and cytostatic activity. The polypuclectides are useful in gene therapy. A composition containing a polypeptide or polynuclectide or system, such as a large and central nervous system diseases, such as alzaeral sclerosis, and shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, and thrombolytic activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, arthritis and inflammation, leukaemias and construction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Note: The sequence data for this patent did not form part of the printed specification.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     4,
                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM36642.AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as localised neuropathies and central nervous system diseases, such as lateral schenois, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and constants.

                                                                                                                                                                                                                                                                                                                                            the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynuclectides are useful in gene therapy. A composition containing a polypeptide or polynuclectide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                4;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  aplastic anaemia, incondeficiency anaemia, megalobiastic anaemia, sickle-cell anaemia, polycythaemia, malaria, leukaemia, myelodysplasia, lymphoma, leucopenia, splenectomia, inflammation, infection, cancer, autoimmunity or immunodeficiency. The method involves drug-delivery treatment of an individual. The medicament is also useful for inhibiting (in vivo) uptake of haemoglobin in cells presenting a CD163 receptor. The CD163 variant is also useful in diagnosing, monitoring and/or controlling a condition in an individual. In particular, the CD163 variant is useful for identifying macrophages in a blological sample from an individual, for identifying at least one Hp-Hb complex in serum and/or plasma of an individual, or for removing at least one Hp-Hb complex in serum and/or plasma of an individual. The present amino acid sequence represents the human CD163 receptor cytoplasmic variant 2 of the invention.
                                                                                                                               New haptoglobin-haemoglobin complex or its mimics or receptors, useful in gene therapy, particularly for treating an individual suffering from e.g. haemolysis, anaemia, inflammation, infection, cancer or autoimmunity
                                                                                                                                                                                                                                                                complex, or its part or mints, being operably linked to a substance, capable of binding a CD163 receptor and/or a CD163 receptor variant. The Hp-Hb complex or its mints, the CD163 variant or the CD163 receptor variant are useful as a medicament or in the manufacture of a medicament for treating an individual. The medicament comprises at least one drug to be delivered to a cell expressing a CD163 receptor or a CD163 variant. The medicament may also comprise at least one gene to be delivered to a cell expressing a CD163 variant. The medicament is an antiblotic or an anticancer drug, e.g. an anti-HIV (human anticancer drug, e.g. an anti-HIV (human immunodeficiency virus) drug. In particular, the Hp-Hb complex or its minic, the CD163 variant or the CD163 receptor, or the medicament are useful for treating haemolysis and/or other haematological conditions,
                                                                                                                                                                                                                                                      a new haptoglobin-haemoglobin (Hp-Hb)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 542
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   220

sickle-cell anaemia, polycythemia, megalorasir, disemia, angeliasia, sickle-cell anaemia, polycythemia, medalatia, leukaemia, myelodysplasia, lymphoma, leucopenia, splenectomia, inflammation, infection, cancer, autoimmunity or immunodeficiency. The method involves drug-delivery treatment or gene delivery treatment of an individual. The medicament is also useful for inhibiting (in vivo) uptake of haemoglobin in cells presenting a CDIG3 receptor. The CDIG3 variant is also useful in diagnosing, monitoring and/or controlling a condition in an individual. In particular, the CDIG3 variant is useful for identifying macrophages in a blodogical sample from an individual, for identifying at least one Hp-Hb complex in serum and/or plasma of an individual, or for removing at least one hp-Hb complex in serum and/or plasma of an individual. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New haptoglobin-haemoglobin complex or its mimics or receptors, useful in gene therapy, particularly for treating an individual suffering from e.g. haemolysis, anaemia, inflammation, infection, cancer or autoimmunity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              complex, or its part or minic, being operably linked to a substance, capable of binding a CD163 receptor and/or a CD163 receptor variant. The HP-HB complex or its minic, the CD163 variant or the CD163 receptor are useful as a medicament or in the manufacture of a medicament for treating an individual. The medicament comprises at least one drug to be delivered to a cell expressing a CD163 receptor or a CD163 variant. The medicament may also comprise at least one gene to be delivered to a cell expressing a CD163 variant. The medicament is an antibiotic or an anticancer drug, e.g. an anti-HIV (human is an antibiotic or an anticancer drug, e.g. an anti-HIV (human is an antibiotic or an anticancer drug, in particular, the HP-HB complex or its minic, the CD163 variant or the CD163 receptor, or the medicament are useful for treating haemolysis and/or other haematological conditions, aplastic anaemia, iron-deficiency anaemia, megaloblastic anaemia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to a new haptoglobin-haemoglobin (Hp-Hb)
                                                                                                                                 .9

New haptoglobin-haemoglobin complex or its mimics or receptors, useful in gene therapy, particularly for treating an individual suffering from e.g. haemolysis, anaemia, inflammation, infection, cancer or autoimmunity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a new haptoglobin-haemoglobin (Hp-Hb) complex, or its part or mimic, being operably linked to a substance, angable of binding a CD163 receptor and/or a CD163 receptor variant.

The Hp-Hb complex or its mimic, the CD163 variant or the CD163 receptor are useful as a medicament or in the manufacture of a medicament for treating an individual. The medicament comprises at least one drug to be delivered to a cell expressing a CD163 receptor or a CD163 variant. The medicament may also comprise at least one gene to be delivered to a cell expressing a CD163 receptor or a CD163 variant. The medicament is an antibolic or an anticancer drug, e.g. an anti-HIV (human immunodeficiency virus) drug. In particular, the Hp-Hb complex or its mimic, the CD163 variant or the CD163 receptor, or the medicament are useful for treating haemolysis and/or other haematological conditions,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 sickle-cell anaemia, polycythaemia, malaria, leukaemia, myelodysplasia, tymphoma, Leucopenia, splenectomia, inflammation, infection, cancer, autoimmunity or immunodeficiency. The method involves drug-delivery treatment or gene delivery treatment of an individual. The medicament is also useful for inhibiting (in vivo) uptake of haemoglobin in cells presenting a CD163 receptor. The CD163 variant is also useful in diagnosing, monitoring and/or controlling a condition in an individual.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            sickle-cell anaemia; polycythaemia; malaria; leukaemia; myelodysplasia; lymphoma; leucopenia; splenectomia; inflammation; infection; cancer; autoimmunity; immunodeficiency; CD163 receptor cytoplasmic variant 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        complex;

In particular, the CD163 variant is useful for identifying macrophages in a biological sample from an individual, for identifying at least one Hp-Hb complex in serum and/or plasma of an individual, or for removing at least one Hp-Hb complex in serum and/or plasma of an individual. The present amino acid sequence represents the human CD163 receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SHLWQCPSRGWGQHDCRHKEDAGVICSEFTALRLYSETETESCAGRLEVFYNGTWGSVGR 1169

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM3642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathses and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic

The TANGO/INTERCEPT proteins and coding sequences are useful for the treatment of neurological disorders, such as central nervous system (CNS) disorders, CNS-related disorders, focal brain disorders, global-diffuse cerebral disorders and other neurological and cerebrovascular disorders. The CNS disorders include Alzheimer's disease, senile dementia, Huntington's disease, amyotrophic lateral sclerosis, Parkinson's, Gilles de la Tourette's syndrome, autonomic function disorders such as hypertension and sleep disorders, neuropsychlatric disorders, psychoactive substance use disorders, anxiety, and bipolar affective disorder. The present sequence is a sequence used in a sequence homology alignment with the TANGO/INTERCEPT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TANGO and INTERCEPT nucleic acids, proteins, and antibodies, useful for screening assays and diagnostic assays and for the treatment of neurological diseases such as Alzheimer's, Parkinson's and Huntington's

28; a human protein which contains a SRCR (scavenger domain. The gene and encoded protein can be used nours, particularly of the nervous system ona) or breast. The DNA sequence and probes d to identify genes that express SRCR-domain determine the form in which these proteins exist icance of individual forms on cellular can be used to detect the presence of odies which regulate its expression.
